

# MAINETEC

## Capability Statement

# Our Company

*Mainetec is different.*

***In 2010 Mainetec was formed by director Brett Hampson with a vision to bring innovation to the resource sector, and this remains our philosophy today.***

Naturally, our key focus is on high quality deliverables at the best possible price, but Mainetec goes one step further – we actively partner with our customers to reduce their asset operating costs. With our extensive range of offerings - rebuilds and parts, fabrication and repair, unsurpassed site services, audits, condition monitoring and drafting – Mainetec has the products to support the asset cycle from start to finish.

We know this business, but we never stop learning. We are constantly reviewing current work practices to assess their validity, whilst looking for ways to deliver genuine improvements for our clients.

## Our Team

*Mainetec employs the best.*

» Our management team has a wealth of knowledge and expertise, all have experience in heavy industry, many have worked for large mining equipment OEMs.

» Our tradesmen are qualified both externally by the accrediting body and internally to our exacting quality standards.

» Mainetec supports the community by employing locally as a first choice. We have an active apprentice program from school based to adult trainees offering comprehensive support, mentoring and guidance throughout the learning cycle.

# Safety, Quality and the Environment

*Mainetec is serious about safety. Safety is always our first priority.*

*Mainetec has developed an extensive safety management program compliant to AS/NZS 4801:2001 to ensure that our employees are always safe.*

## Quality

*Mainetec stands by the quality of its work.*

Working to ISO9001 standards, our quality is second to none. Major rebuilds are backed by extensive Quality Assurance records. In addition, we have upskilled our workforce to include an AS 2214 Certificate 10 qualified welding supervisor. All our boilermakers are accredited to AS2980.

## The Environment

*At Mainetec we love the Queensland life.*

We don't want to damage our environment for generations to come. To monitor and minimise our environmental impact, our operations comply with ISO14001.

## Compliance

Things change. We audit our systems regularly to ensure that they comply with the latest legislation and site specific requirements.

# What we offer

*Mainetec has the range.*

## Fabrication and Repair

***At our state-of-the-art manufacturing facility – including our latest addition, a Fanuc welding robot – we can handle the biggest to the smallest of jobs to deliver solutions tailor-made to our client's requirements.***

We love a challenge. We have the ability to fabricate any job including dragline buckets, walkways, chutes, stairs, wear liners, excavator buckets, booms, sticks and side frames. We are committed to using only the best quality materials and with QA systems in place, all works are documented ensuring 100% traceability.

## Parts

Need parts? Mainetec can deliver. We have an extensive, high quality range of parts at very competitive prices, to suit your needs.

Just ask us about:

- » GET and wear parts
- » Electric shovel parts
- » Excavator buckets and parts
- » Dragline buckets and parts
- » Dragline rigging parts
- » Castings and forgings

## Drafting, Design and Engineering

Using the latest 3D drafting technology, we work with our clients to redesign equipment to Australian Standards, either from our workshop or whilst on-site. All jobs can be engineer certified and FEA modelled if required. We can supply fabrication drawings, installation drawings and General Arrangement drawings.

## Plasma Transfer Arc Welding (PTAW)

Mainetec is proud to have been the first business in Queensland to invest in PTAW technology. Developed in Europe and North America, Mainetec has made this technology an integral part of the Australian resource sector. PTAW is the perfect way to extend service life, reduce downtime, and ultimately, reduce costs.

## On-site labour hire and services

Lost time is lost revenue. At Mainetec we know that unexpected downtime can come at a major cost to our clients. Our team of specialists work with you to help you to get back up and running sooner, and provide smart solutions for your future projects.

Our site support includes:

- » Quality boilermakers
- » Condition monitoring inspections
- » Writing work scopes and managing site shutdowns and rebuilds
- » Drafting, design and 3D modelling

When we come to you we have the whole package. We have a fleet of fully mine compliant vehicles and welding trailers, as well as two fully equipped site containers for jobs of longer duration.
